

SIRIUS track - take control of your assets

SIRIUS track – as simple as tracking should be.
Track and manage your assets whenever and wherever it suits you.

Fleet Management System

Polaris Electronics A/S has a complete asset management platform through the web based tracking solution SIRIUS track. The functionality is based on our own experience and needs as a maritime service center, input from our partners and requirements from end users.

We can track units reporting both via the Inmarsat and the Iridium satellites including Inmarsat C, Mini C, Fleet Broadband and Iridium SBD based transceivers.

Available Anywhere

The system is cloud based and accessible from any internet capable device through a browser. No installation required for the user. Simply log in and manage the vessels.

Low Cost Solution

With SIRIUS track you can choose the rate plan that meets your needs of each asset in your fleet. SIRIUS track gives you the right information at the right price for your fleet.

Zones

When operating in high-risk areas or under dangerous conditions and strict regulations, it is vital that you know where your assets are located in near real-time. That's why you can create operational zones, automatically increase reporting frequency and get notified when your assets enters or exits a zone.

Manage access

Create logins to view specific vessels on the map or grant access to request positions on a group of vessels. SIRIUS track enables you to specify access right down to a single vessel. Flexible and simple to set up.

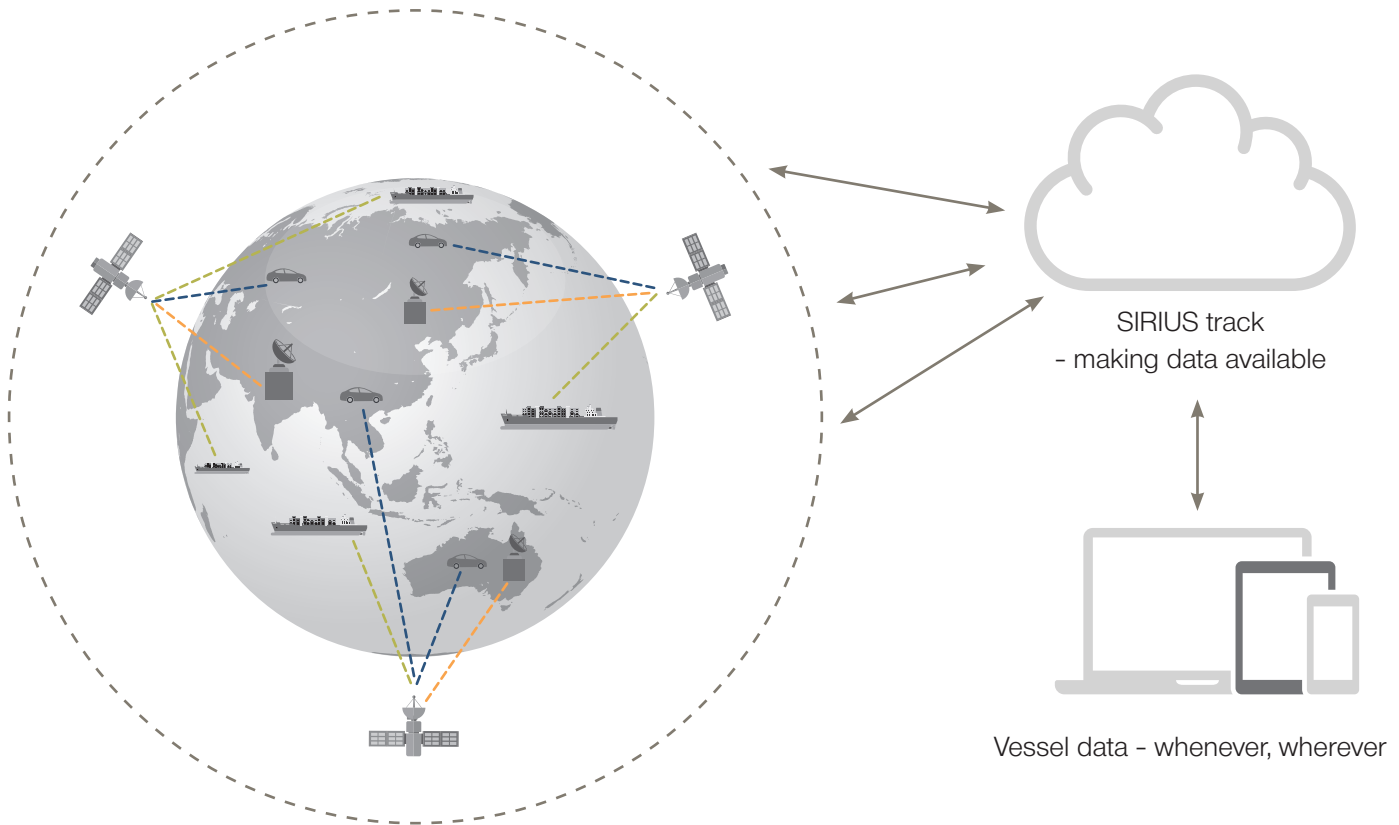

Key features

- ✓ Monitor your fleet from any web based device
- ✓ Unlimited user logins
- ✓ Messaging to and from your assets
- ✓ Manage high risk areas
- ✓ LRIT related features

One-stop-shop for airtime, service, hardware and installation.
We are on your team – working towards full operation at all times and at low cost.
