Track Data can use for navigation.

1. Press the [F] key to display the GOTO options window.

2. Choose "GOTO TRACK".
3. Press the [ENT] key.

A screenshot of a table titled 'SAVED TRACK'. The table has five columns: 'No.', 'Name', 'Date', 'Distance', and 'Points'. There are 8 rows of data. The 'Points' column contains 'OFF' for all rows.

No.	Name	Date	Distance	Points
1	:		nm	OFF
2	:		nm	OFF
3	:		nm	OFF
4	:		nm	OFF
5	:		nm	OFF
6	:		nm	OFF
7	:		nm	OFF
8	:		nm	OFF

4. Choose Track Log to display the following menu.

5. Choose Forward or Reverse to start GOTO TRACK navigation.

Once a GOTO TRACK has been activated, the track will divide it into segments. Up to 200 temporary "waypoint" are created (named T1, T2, T3, etc. and END) to mark the most significant features of the track, duplicating your exact path as closely as possible. To get the most out of the GOTO TRACK feature, remember the following tips:

- Always clear the track log at the point that you want to go back to.
- There must be at least two track log points stored in memory to create a track route.
- If the receiver is turned off or satellite coverage is lost during your trip, it will draw a straight line between any point where coverage was lost and where it resumed.
- If your track's changes in distance and direction are too complex, 200 waypoints may not mark your path accurately.

The receiver then assigns the 200 waypoints to the most significant points of your track, and simplifies segments with fewer changes in direction.

6.5 Cancelling Destination

You can cancel destination as follows.

1. Press the [F] key.

2. Choose **STOP GOTO** and press [ENT] key.

9.4 Magnetic Variation

The location of the magnetic north pole is different from the geographical North Pole. This causes a difference between the true and magnetic north direction. This difference is called magnetic variation, and varies with respect to the observation point on earth.

Your unit is preprogrammed with all the earth's magnetic variation. However, you may wish to enter variation manually to refine accuracy. Set. BRG REF. on the PLOTTER is set to "**MAGNETIC**" to use magnetic variation.

1. Press [**MENU**] key twice to main menu.
2. Choose **SETUP** and then press [**►**] key.

9.8 GPS Setting

9.8.1 Choosing GPS output data

The unit default using GPS module single for position fixing. On the other hand, you can use external GPS data for position fixing.

1. Press **[MENU]** key on the **SATELATE SCREEN**.

2. Choose **OUTPUT** and then press **[ENT]** key.

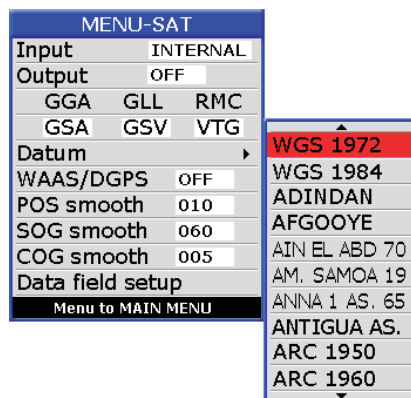

3. Select your desired output data, press **[ENT]** to finish.

9.8.2 Datum Setting

You can choose 6 types data output at the same time.

1. Press **[MENU]** on the **SATELATE SCREEN**.
2. Choose **DATUM** and press **[ENT]** key.

3. Choose your desired datum and press **[ENT]** to confirm.

9.8.3 Smoothing

You can setup position smoothing, speed smoothing and course smoothing.

1. Press **[MENU]** key on the **SATELATE SCREEN**.

2. Choose **POS** smooth for enter position smoothing data.
3. Choose **SOG** smooth for enter speed smoothing data.
4. Choose **COG** smooth for enter course smoothing data.

10.4 Chart Screen

Users can check all AIS vessels being received in real-time on the chart screen, as well as the specific position and track of the own ship on the charts.

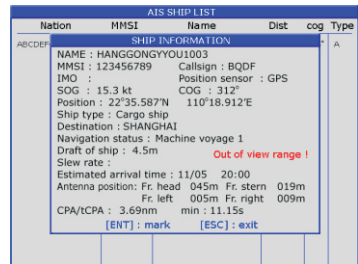

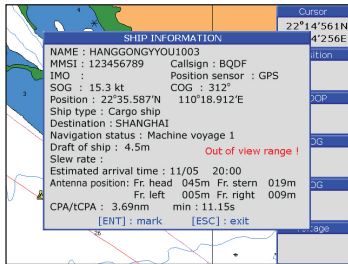

The track length of AIS vessels depends on the equipment memory space, generally not less than 20 track points.

10.5 View AIS Vessels' Information on Chart Screen

There're two ways to view AIS vessels' information: one is to move the cursor to select AIS vessel on the charts screen, and press the [ENT] key.

The other is to select the AIS vessel from the AIS vessels list, and press the [ENT] key.

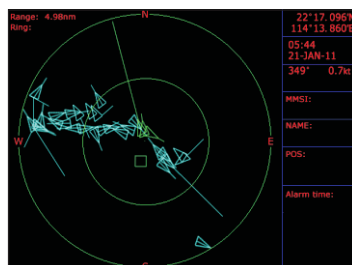

10.6 Check All AIS Ships Within the Scope of Radar(AIS Screen)

Displays all AIS ships within the current scope of the Radar, the current location of the own ship is at the center of the map, appearing as a white hollow triangle, and the vertex angle of the triangle stands for the current direction of the own ship, the blue hollow triangle stands for the vessels of CLASS B, the green hollow triangle stands for CLASS A vessels, the green hollow square stands for BASE STATION, and the vertex angle of the triangle stands for the direction of the vessel, such as round, and the circle stands for no direction.

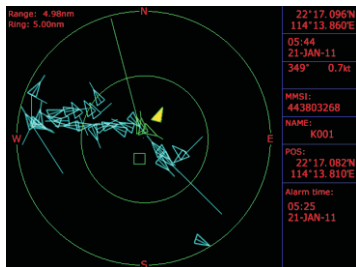

The collision alarm setting and the current scope of radar can be displayed on the upper left corner of the radar, and the scope be adjusted by pressing the [F4] key and [F5] key.

The message display frame on the upper right corner of the radar displays the following information: the own ship's position, the current time, the current speed/direction of the own ship.

10.7 Emergency Alarm

The information of the emergency alarm received is displayed on the bottom right corner. The emergency alarm is always available and can not be deleted, if the emergency alarm information is not read, after exiting the alarm menu, the "emergency alarm" window will pop up a little latter. The warning ship displayed on the Radar will be yellow and flashing.

The relevant data (including the time, place, the relevant ship's information, etc.) will also be saved by the display terminals, it can be the basis of analysis in the event of any accident.

10.8 Entry/Departure Setting

The Entry/Departure setting is for temporarily shut down or restart the collision alarm, when entering the port the collision alarm will be temporarily closed, when leaving the port the collision alarm will be opened.

1. Press the **[MENU]** key at the **AIS SCREEN**.
2. select **In Port** or **Out Port** and Press **[ENT]**.

Operation Manual

*1 Spare Fuses

*1● 0.5A fuse should be used for power voltage 12v.

12.2 Installing the Unit

Notice: The unit should be mounted on a flat, solid surface for maximum stability. Be sure to fix the mounting bracket with screws. Otherwise, the display unit may fall down by the boat's pitching and rolling to the lead to the fire or the injury.

- (1) The mounting bracket should be fixed with 6mm screws.
 - Do not install the unit at the places that affected with vibration or get wet with spary or rain.
 - Avoid the places where the sun comes in because it is difficult to see the screen or the unit is heated too much.
 - Be sure that the space between the rear side of the unit and the wall is more than 10cm.
- (2) Fix the unit to the mounting bracket firmly with the knobs so as to prevent it to get out of the bracket while running.

The submitted products have been tested by us with the listed standards and found in compliance with the following European Directives:

The EMC Directive 2004/108/EC

EN 61000-6-3: 2007+A1: 2011, EN 61000-6-1: 2007

The tests were performed in normal operation mode. The test results apply only to the particular sample tested and to the specific tests carried out. This certificate applies specifically to the sample investigated in our test reference number only.

The CE markings as shown below can be affixed on the product after preparation of necessary technical documentation.

Other relevant Directives have to be observed.
