### **TECHNICAL APPROVAL TO BE USED ON BOARD FISHING VESSELS FOR POSITION REPORTING**

We refer to the received declaration of compliance on functionality of tracking equipment used on board fishing vessels dated 5 April 2017. The declaration applies to equipment of the type Sirius One.

The Directorate of Fisheries has for the time being completed the testing of the Sirius One transceiver, equipment and communication of position reports between the vessel and the server at Polaris as well as the forwarding of reports to the Directorate of Fisheries. The Directorate of Fisheries has also been given access to the necessary tools for manipulating the Sirius One transceivers. Polaris has implemented the "NAF-string" to secure that the Directorate is able to manipulate the transceivers directly from internal systems in the Directorate.

The results of these tests are positive, and the equipment has been found to fully comply with the Norwegian Regulations of 11. June 2010 regarding the requirements for equipment to be used on board fishing vessels for tracking purposes.

Technical approval No. 1-2017 is attached to this letter (/.).

Yours sincerely,

Stein-Åge Johnsen  
Head of Section

Hanne Østgård  
Senior Adviser
