To Whom it may Concern

TT-3000 LRIT System

The SAILOR TT-3000 LRIT system is based upon the transceiver type SAILOR TT-3026M with a LRIT dedicated configuration. The rest of the system consists of a pole mount and connection cable.

As there is no dedicated official LRIT type approval procedure Thrane & Thrane can state that this terminal fully meets and exceeds IMO Circ. 1/257 as well as the LRIT performance standard. Furthermore the transceiver is type approved by Inmarsat, and is equal to the TT-3026C GMDSS transceiver in relation to physical specifications, thereby also de-facto meeting IC 60945.

Kind regards
